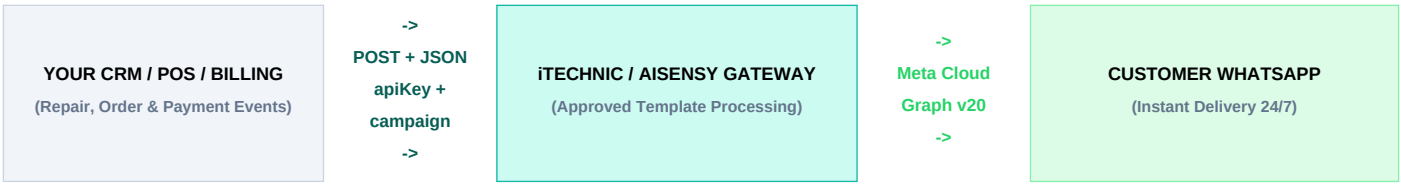
Enterprise WhatsApp API Integration Manual (AiSensy Standard)

Complete Technical Specification for Connecting Repair Billing, ERP & POS Systems using the Universal Campaign API Format

Production API URL:	**https://whatapp-automation-kxml.onrender.com/campaign/t1/api/v2**
Interactive Hub:	**https://itechmobileswhatsappautomation.vercel.app** (under API Hub tab)
Authentication:	JSON Body: "apiKey": "itech_live_sec_7f9984e1b9384e9d9a1f" (or header x-api-key)
Meta WABA Account ID:	1758570912097342 (Official Verified Meta WhatsApp Account)
Developer Hotline:	+91 9361863063 · email: itechnicmobiles2@gmail.com · Tirukannur, Pondicherry - 605501

1. Core API Architecture & Message Flow

Your CRM, POS, or Billing Software dispatches repair, order, payment, and customer events using a single, universal HTTP POST request. The gateway authenticates the API key, matches the campaign name to the pre-approved Meta Utility Template, maps variables, and delivers instantly to the customer's WhatsApp.



2. Universal API Endpoint Specification

HTTP Method: POST
Endpoint: https://whatapp-automation-kxml.onrender.com/campaign/t1/api/v2
Content-Type: application/json
Authentication: Provided using apiKey in the JSON request body (no custom headers required).

3. Standard JSON Request Format & Parameter Reference

```
POST /campaign/t1/api/v2 HTTP/1.1
Host: whatapp-automation-kxml.onrender.com
Content-Type: application/json

{
  "apiKey": "itech_live_sec_7f9984e1b9384e9d9a1f",
  "campaignName": "repair_booking_confirmation",
  "destination": "+919876543210",
  "userName": "Ramesh Babu",
  "templateParams": [
    "REP-1042",
    "Apple iPhone 13",
    "Screen Replacement",
    "Same Day"
  ]
}
```

Parameter	Required	Data Type	Purpose & Notes
apiKey	**Yes**	String	Your live production secret API key.
campaignName	**Yes**	String	Name of the configured notification campaign (see mapping below).
destination	**Yes**	String	Customer WhatsApp number with country code (e.g. +919876543210).
userName	**Yes**	String	Customer full name (injected as greeting parameter {{1}}).
templateParams	**Yes**	Array[Str]	Dynamic template variables matching the approved template order.
source	No	String	Lead source or software identifier (e.g. "CRM", "Tally").
media	No	Object	Optional attachment object: {"url": "...", "filename": "invoice.pdf"}.
tags	No	Array[Str]	Contact tags for segmentation (e.g. ["Retail Customer"]).
attributes	No	Object	Custom CRM key-value metadata saved to customer ledger.

4. CRM Event Mapping using AiSensy Campaign Names

For your mobile retail and repair CRM, use these standard campaign names for each business trigger event:

CRM Trigger Event	AiSensy Campaign Name	Template Parameters Order in templateParams
New Repair Booking	repair_booking_confirmation	["Job ID", "Device Model", "Service Required", "Turnaround Time"]
Repair Status Update	repair_status_update	["Job ID", "Device Model", "Live Status Description"]
Device Ready for Pickup	device_ready_pickup	["Job ID", "Device Model", "Final Bill Amount", "Invoice Number"]
Service Diagnostic Quotation	service_quotation	["Job ID", "Device Model", "Diagnosed Issue", "Estimated Cost"]
Retail Order Dispatched	order_dispatched	["Order ID", "Device / Accessory", "Status", "Tracking Number"]
Digital Warranty Issuance	warranty_confirmation	["Job / Bill ID", "Device Model", "Warranty Period (e.g. 90 Days)"]
Doorstep Pickup Scheduled	doorstep_pickup_confirmation	["Booking ID", "Date & Time Slot", "Pickup Address"]
Payment Received / Settled	payment_confirmation	["Bill / Invoice Number", "Amount Paid", "Payment Mode (UPI/Cash)"]

5. WhatsApp Template Message Layouts & Parameter Mapping

These pre-approved Meta templates format customer messages automatically:

```
// EXAMPLE A - Repair Booking Confirmation (campaign: repair_booking_confirmation)
Template Text:
Hello {{1}},
Your repair booking has been confirmed!

Job ID: {{2}}
Device: {{3}}
Service: {{4}}
Expected Completion: {{5}}

Thank you for choosing iTechnic!
API templateParams: ["REP-1042", "Apple iPhone 13", "Screen Replacement", "Same Day"]

// EXAMPLE B - Device Ready for Pickup & Invoice (campaign: device_ready_pickup)
Template Text:
Hello {{1}},
Your device is ready for pickup!

Job ID: {{2}}
Device: {{3}}
Final Amount: Rs.{{4}}
Invoice Number: {{5}}

Please visit our store to collect your device.
API templateParams: ["REP-1042", "Apple iPhone 13", "4500", "INV-2026-908"]

// EXAMPLE C - Retail Order Dispatched (campaign: order_dispatched)
Template Text:
Hello {{1}},
Your order {{2}} for {{3}} has been {{4}}.
Tracking AWB: {{5}}

Track delivery live or reply for help!
API templateParams: ["ORD-1001", "Apple iPhone 15", "Dispatched via Express", "TRK-12345"]
```

6. Production API Integration Code (Copy & Paste)

Helper functions for your CRM, Billing, or ERP software stack:

6.1 Node.js / TypeScript (Axios)

```
const axios = require('axios');

const AISENSY_API_URL = 'https://whatapp-automation-kxml.onrender.com/campaign/t1/api/v2';

async function sendWhatsAppNotification({ campaignName, phone, customerName, templateParams, media }) {
  try {
    const response = await axios.post(
      AISENSY_API_URL,
      {
        apiKey: process.env.AISENSY_API_KEY || 'itech_live_sec_7f9984e1b9384e9d9a1f',
        campaignName: campaignName,
        destination: phone,
        userName: customerName,
        templateParams: templateParams,
        media: media || undefined
      },
      { headers: { 'Content-Type': 'application/json' }, timeout: 15000 }
    );
    return response.data;
  } catch (error) {
    console.error('WhatsApp API Error:', error.response?.data || error.message);
    throw error;
  }
}

// Example Trigger from Repair Booking Module:
await sendWhatsAppNotification({
  campaignName: 'repair_booking_confirmation',
  phone: '+919876543210',
  customerName: 'Ramesh Babu',
  templateParams: ['REP-1042', 'Apple iPhone 13', 'Screen Replacement', 'Same Day']
});
```

6.2 Python (Odoo, ERPNext, Django, FastAPI)

```
import requests

API_URL = 'https://whatapp-automation-kxml.onrender.com/campaign/t1/api/v2'
API_KEY = 'itech_live_sec_7f9984e1b9384e9d9a1f'

def send_whatsapp(campaign_name, phone, name, params, media=None):
    payload = {
        'apiKey': API_KEY,
        'campaignName': campaign_name,
        'destination': phone,
        'userName': name,
        'templateParams': params
    }
    if media: payload['media'] = media
    res = requests.post(API_URL, json=payload, headers={'Content-Type': 'application/json'}, timeout=10)
    return res.json()

# Example: Trigger when device is ready for pickup:
send_whatsapp('device_ready_pickup', '+919876543210', 'Ramesh Babu', ['REP-1042', 'iPhone 13', '4500', 'INV-2026-908'])
```

6.3 Terminal / cURL Request

```
curl --location 'https://whatapp-automation-kxml.onrender.com/campaign/t1/api/v2' \
--header 'Content-Type: application/json' \
--data-raw '{
  "apiKey": "itech_live_sec_7f9984e1b9384e9d9a1f",
  "campaignName": "repair_booking_confirmation",
  "destination": "+919876543210",
  "userName": "Ramesh Babu",
  "templateParams": ["REP-1042", "Apple iPhone 13", "Screen Replacement", "Same Day"]
}'
```

6.4 PHP (Laravel, CodeIgniter, Core PHP, Tally / POS Webhook)

```
<?php
function sendAiSensyCampaign($campaignName, $phone, $name, $params, $media = null) {
    $payload = [
        'apiKey'         => 'itech_live_sec_7f9984e1b9384e9d9a1f',
        'campaignName'   => $campaignName,
        'destination'    => $phone,
        'userName'       => $name,
        'templateParams' => $params
    ];
    if ($media) { $payload['media'] = $media; }
    $ch = curl_init('https://whatapp-automation-kxml.onrender.com/campaign/t1/api/v2');
    curl_setopt($ch, CURLOPT_RETURNTRANSFER, true);
    curl_setopt($ch, CURLOPT_POST, true);
    curl_setopt($ch, CURLOPT_POSTFIELDS, json_encode($payload));
    curl_setopt($ch, CURLOPT_HTTPHEADER, ['Content-Type: application/json']);
    $res = curl_exec($ch);
    curl_close($ch);
    return json_decode($res, true);
}
?>
```

7. Developer Configuration & Setup Procedure

STEP-BY-STEP INTEGRATION PROCEDURE:

1. **Obtain API Key:** Use production key itech_live_sec_7f9984e1b9384e9d9a1f. Place it in environment variables.
2. **Map CRM Triggers:** Identify which CRM button or database event fires each notification (e.g. Save Repair Booking -> repair_booking_confirmation).
3. **Format Payload:** Pass mobile numbers as E.164 strings with country code (e.g. +919876543210). Order parameters exactly as specified.
4. **24-Hour Window Bypass:** All campaigns map to pre-approved Meta Utility Templates. They deliver 24/7/365 without 24h restrictions.
5. **Live Testing & Verification:** Test every campaign live and view instant HTTP responses directly at: **https://itechmobileswhatsappautomation.vercel.app** (under the *API Hub* tab).

8. Additional Optional Parameters (Media, Tags & Attributes)

```
{
  "apiKey": "itech_live_sec_7f9984e1b9384e9d9a1f",
  "campaignName": "order_dispatched",
  "destination": "+919876543210",
  "userName": "Ramesh Babu",
  "templateParams": ["ORD-1001", "Dispatched", "TRACK-12345"],
  "source": "CRM Billing",
  "media": {
    "url": "https://whatapp-automation-kxml.onrender.com/invoice.pdf",
    "filename": "Tax_Invoice_INV-1001.pdf"
  },
  "tags": ["Retail Customer", "VIP"],
  "attributes": { "customer_type": "Retail", "store_location": "Tirukannur" }
}
```
